

**LUXURY OF BIODIVERSITY**

### **„Knut“ is dead, the RÜMPERIENS are alive**

After the tragic end of the polar bear „Knut“, Berlin has a new attraction again now - THE RÜMPERIENS.

The artist Carola Rümper became aware of a small group of Rümperiens who had settled in a tree by a note of the owner of a garden plot. After securing the area, it was opened to the public. Many people pilgrimage to the garden colony „Hand in Hand“ in Berlin-Neukölln to see the alien life form. By two raised hides it was possible to observe the Rümperiens with binoculars. Information signs informed the visitors about the population.

There have been spotted 8 exemplars in the size of 8 x 10 x 10 cm.

19th June, 2011: Throughout the day groups of people informed themselves about the Rümperiens and discover them in the area of the allotment „Hand in Hand“ in Berlin-Neukölln

Rümperien discovered 19th June, 2011 at 1:12 pm by Mr F.

Mr F. discovered a Rümperien after 31 minutes

## THE RÜMPERIENS

There is an unknown kind of beings, which is investigated and documented by the artist Carola Rümper since several years. The artist already found the population in her childhood in the northern lowlands of Germany (a region called: Land Wursten), where she grew up.

- Counted individuals: 161.341
- Incidence in states since now: Germany, Egypt, Russia, Switzerland and Alaska
- Remarkable characteristics: Rümperiens has a black skin and different kinds of tentacle.

They are very shy and show themselves to humans only rarely. But their natural curiosity let them penetrate into human homebound units again and again.

RÜMPERIEN # 66.020

## Luxury of biodiversity
